## How to Avoid the September Asthma Peak

September is a peak time for asthma attacks in the United States. This is when emergency department visits and hospital admissions for asthma tend to rise to their highest levels, especially among children.

25% of all children's asthma hospitalizations occur in September

3rd week of September = asthma peak

| SEPTEMBER |    |     |    |    |    |     |    |
|-----------|----|-----|----|----|----|-----|----|
|           | 1  | 2   | 3  | 4  | 5  | 6   | 7  |
|           | 8  | 9   | 10 | 11 | 12 | 13  |    |
|           | 5  | 16  | 1= |    |    | 13  | 14 |
|           |    | ]10 | 17 | 18 | 19 | 20  | 21 |
|           | 22 | 23  | 24 | 25 | 26 | 27  | 28 |
|           | 29 | 30  |    |    |    | = / | 20 |
|           |    |     |    |    |    |     |    |

**13.8 MILLION** school days missed annually due to asthma

## Why does this happen?

Respiratory

When school starts, children with asthma are often exposed to more asthma triggers.

viruses, including the flu Diesel exhaust

pollen

Ragweed

from school buses
Chemicals from

cleaning products used at school

## 9 ways to keep your child's asthma well-controlled in September – and beyond!

- child's doctor before September.Review your child's asthma treatment plan with teachers and the school nurse.
- Make sure quick-relief and controller asthma inhalers are not expired or close to expiring.

Schedule an asthma checkup with your

- Have your child carry a quick-relief inhaler at school, even if the school stocks emergency inhalers.
- Ask school staff to reduce exposure to asthma triggers. Can teachers hold PE and recess indoors? Can they keep classroom windows closed?
- Ask school administration or janitorial staff to use non-toxic cleaning products and disinfectants.

Wash hands often to reduce the risk of

See an asthma specialist if your child's

- picking up a cold or virus.

  Get the flu and COVID-19 vaccines to reduce the risk of getting a respiratory virus.
- symptoms are not improving.
